

An information response system for communicating a response information to an informant answering a public information provided by the informant has a display selector (121) for selecting a display (4, 6) out of a plurality of displays (4, 6) onto which the public information is displayed, a response information receiver (131) for receiving the response information answering the displayed public information, and a response information communicator (15) for communicating the response information received by the response information receiver (131) to the informant. Since the display selector (121) is provided, the informant can designate the display (4, 6) for displaying the public information, so that localized response information can be obtained.
